The Order of the Elements

1 7 8 9

Lavoisier defines the chemical element:

We apply the term elements to express our idea of the last point which analysis is capable of reaching.

Lavoisier

Dalton

1 8 0 3

Dalton proposes the atomic theory, associates a defined weight to the atoms of each element and organizes them according to such weights.

1 8 0 7

Davy applies electrolysis to the isolation of elements from their compounds: K, Na, Mg, Sr, Ca and Ba.

1 8 1 5

Prout publishes the hypothesis that elements are constituted by hydrogen atoms and that atomic weights are integer numbers.

Ampère

1 8 1 6

Ampère proposes an ordering of the elements *Annales de Chimie et Physique*, 2, 5, 108 (1816).

1 8 2 9

Döbereiner organizes the elements in triads.

H. Davy
1778-1829

J. W. Döbereiner
1780-1849

1 8 4 3

Gmelin proposes a classification of the elements.

1 8 5 8

Cannizzaro distinguishes atomic and equivalent weights and establishes correct atomic weights.

Gmelin

1 8 1 6

Pettenkofer, Dumas, Odling, Hinrichs and Strecker contribute towards the organization of the elements in groups and analyze numerical relationships between their atomic weights.

S. Cannizzaro
1826-1910

G. R. Kirchhoff
1824-1887

R. W. Bunsen
1811-1899

A. B. de Chancourtois
1820-1886

J. A. R. Newlands
1838-1898

Chancourtois

Julius Lothar Meyer
1830-1895

Rb
Cs 1 8 6 0

Identification of Rb and Cs by Bunsen and Kirchhoff with the help of the spectroscope triggers the discovery of more new elements.

1 8 6 2

Chancourtois orders the elements in a helical way.

1 8 6 4

Meyer organizes 27 known elements of the main groups in a table of his book *Die modernen Theorien der Chemie*.

1 8 6 5

Newlands organizes in a table 61 elements according to their atomic weights and proposes the law of octaves:

members of the same group stand to each other in the same relation as the extremities of one or more octaves in music.

1 8 6 9

February: He gives to print a leaflet titled *Essay of a system of the elements, based on their atomic weights and chemical affinities*, 150 copies in Russian and 50 in French.

March: Nikolai Menshutkin presents the periodic system to the Russian Chemical Society in the absence of its author, who was supervising cooperatives of cheese producers.

April: Mendeleev publishes in a brief communication in German the periodic system with 62 elements, *Zeitschrift für Chemie*, 12, 405-406 (1869), and a more extensive paper in Russian in *Zhurnal Russkoe Fiziko-Khimicheskoe Obschestvo*, 1, 60-77 (1869).

He publishes the first volume of his book *Osnovi Khimii (Principles of Chemistry)*.

Dmitri Ivanovich Mendeleev
1834-1907

| | | | | | | | | |
|------|--------|---------|----------|-----------|----------|----------|----------|----------|
| | | | Li=69 | Na=23 | K=39 | Rb=85,4 | Cs=132,9 | Fr=200 |

| | | | Pb=207,2 | Bi=208,98 | Po=209 | | | |

Mendeleev, 1869

1 8 7 0

Mendeleev publishes a paper in Russian in which he predicts new elements and proposes changes for some atomic weights.

1 8 7 1

Meyer publishes a table similar to Mendeleev's with 54 elements *Liebigs Annalen der Chemie, Supplementband 7*, 354-364 (1870).

Mendeleev publishes a more detailed paper in German, similar to the one published in Russian in 1869: *Liebigs Annalen der Chemie, Supplementband 8*, 133-229 (1871).

Before and After Mendeleev

| | | | | | |
|----|---|---|---|---|--|
| Al | | | | | |
| Ga | 1 | 8 | 7 | 5 | |

Lecoq de Boisbaudran discovers Ga, predicted by Mendeleev as *eka-Al*.

P. E. Lecoq de Boisbaudran
1838-1912

L. F. Nilson
1840-1899

C. Winkler
1838-1904

| | | | | | |
|----|---|---|---|---|--|
| eB | | | | | |
| Sc | 1 | 8 | 7 | 9 | |

Nilson discovers Sc, predicted by Mendeleev as *eka-B*.

| | | | | | |
|----|---|---|---|---|--|
| Si | | | | | |
| Ge | 1 | 8 | 8 | 6 | |

Winkler discovers Ge, predicted by Mendeleev as *eka-Si*.

| <i>Eka-Silicium</i> | Predicted | Found |
|---|-------------------|------------------|
| Atomic weight | 72 | 72.6 |
| Specific weight | 5,5 | 5,35 |
| Formula for its oxide | ESiO ₂ | GeO ₂ |
| Specific weight of its oxide | 4,7 | 4,70 |
| Its salts will be decomposed by water | | Yes |
| Its chloride, ESiCl ₄ , will be a liquid and its boiling point will be | 90° C | 83° C |

Ramsay discovers argon. Mendeleev, who did not foresee it, refuses to accept it as a new element and interprets it as a new allotropic form of nitrogen, N₃, analogous to ozone. The same author discovers later He (1895), Kr, Ne and Xe (1898). **Dorn** discovers Rn the same year. In that way a new group makes its way into the periodic table.

| | | | | | |
|----|---|---|---|---|--|
| He | | | | | |
| Ne | 1 | 8 | 9 | 4 | |
| Kr | | | | | |
| Xe | | | | | |
| Rn | | | | | |

| | | | | | |
|----|---|---|---|---|--|
| Po | | | | | |
| Ra | 1 | 8 | 9 | 8 | |

Marie and Pierre Curie discover Po and Ra.

W. Ramsay
1852-1916

M. Curie
1867-1934

H. G. J. Moseley
1889-1915

| | | | | | |
|----|---|---|---|---|--|
| He | | | | | |
| Ne | 1 | 9 | 0 | 0 | |

Ostwald incorporates noble gases to the periodic table in his book *Grundlinien der anorganische Chemie*.

| | | | | | |
|--|---|---|---|---|--|
| | | | | | |
| | 1 | 9 | 0 | 5 | |

Werner publishes the first long version of the periodic table.

Werner

| | | | | | |
|---|---|---|---|---|---|
| v | Z | 1 | 9 | 1 | 3 |
|---|---|---|---|---|---|

Moseley notes that the X ray emission frequencies of the elements depend on their position in the periodic system, defines the atomic number and explains the relationship between frequency and atomic number, based on the atomic model recently proposed by Bohr.

| | | | | | |
|--|---|---|---|---|--|
| | | | | | |
| | 1 | 9 | 1 | 8 | |

Hildebrand organizes the periodic table according to atomic numbers in the book *Principles of Chemistry*.

| | | | | | |
|--|---|---|---|---|--|
| | | | | | |
| | 1 | 9 | 1 | 9 | |

Langmuir presents the first table in which each element is associated to its number of valence electrons.

PERIODIC SYSTEM. — ARRANGED SOMEWHAT ACCORDING TO MENDELEEFF

| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |

Hildebrand

| | | | | | |
|--|---|---|---|---|--|
| | | | | | |
| | 1 | 9 | 2 | 5 | |

Pauli proposes the exclusion principle that, together with the spin quantum number proposed by **Uhlenbeck** and **Goudsmit**, provides a rationale for the existence of periods of different lengths in the periodic table.

| | | | | | |
|----|---|---|---|---|--|
| Tc | 1 | 9 | 3 | 7 | |
|----|---|---|---|---|--|

Perrier and **Segré** obtain Tc, the first artificial element.

| | | | | | |
|----|---|---|---|---|--|
| Np | 1 | 9 | 4 | 0 | |
|----|---|---|---|---|--|

Np, the first transuranium element, is obtained in Berkeley.

| | | | | | |
|-----------|---|---|---|---|--|
| Actinides | 1 | 9 | 4 | 9 | |
|-----------|---|---|---|---|--|

Seaborg proposes to place elements heavier than actinium under the lanthanides and calls them *actinides*.

| | | | | | |
|----|---|---|---|---|--|
| Lr | 1 | 9 | 6 | 1 | |
|----|---|---|---|---|--|

The actinide series is completed with the generation of Lr through bombardment of Cf and B in Berkeley.

| | | | | | | | | | | |
